

Better Business Communication Systems

Built to perform

Designed from the ground up as a modular call centre platform, SBS Call Manager improves an organisation's ability to perform telesales and customer support. The ability to work completely standalone, providing all the facilities of a call centre and phone system in one, or integrate with your existing phone system, makes it the perfect choice for both new and existing call centres who are looking to improve performance.

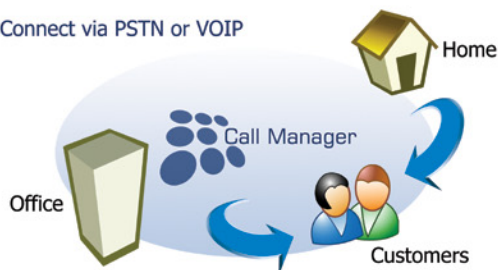

How can we help you?

We can provide our systems in one of three ways:

- Hosted** - Ideal for minimising up-front costs
- Rented** - If you prefer to keep the entire solution under your roof
- Purchase** - Available with a full support and maintenance package

SBS Call Manager's built-in campaign management includes a dialler for outbound campaigns and an inbound call routing system. Both modules can work together, providing a blended system where agents are kept fully occupied on calls, whether they are incoming or outgoing. Using the latest technologies, our systems allow agents to work from any location using only a web browser.

Connect via PSTN or VOIP
